

CSP-AKU

The casing is designed to house the battery which constitutes the back-up power source for an alarm system. The casing enables the creation of an installation in which a standard 12 V 17 Ah battery mounted inside the control panel's housing does not provide a sufficiently long automatic operation without the use of an external power source.

- maximum battery capacity: 24 Ah

Dimensions

200x170x230 mm
